

Catch-All HR

STORMWATER INLET PROTECTOR for OPEN CURBS

Now the **Catch-All HR** can provide additional protection from oil-laden stormwater flowing into a curb inlet, where there is a vertical opening, with a replaceable *Oil Boom*.

The *Oil Boom* is a filter for Hydrocarbon Adsorption that is made of the same material as the pillow stitched into a standard **Catch-All HR**. It is secured to the back of the top frame so that water running along the curb will drip down through its surface. Hydrocarbon products are caught in the replaceable Boom. Tests have shown our *Oil Boom* to be capable of adsorbing over 6 times its weight in common motor oil.

The *Oil Boom* can be easily attached to most standard **Catch-All** rectangular frames, to provide instant protection where and when it is needed. The **Catch-All HR** can be installed permanently in large parking lots and high-volume commercial areas to prevent water pollution from hydrocarbon-laden run-off.
