

Polymers

ERO-TEX anionic polymers will reduce sediment loading into creeks, streams and lakes from your roadway projects and construction sites with a properly designed sediment or stormwater pond.

With new N.P.D.E.S. Phase II regulations in place, reducing the discharge of sediment from your site is now more critical than ever.

ERO-TEX FLOC LOG/POLYMER are manufactured by APS for specific soil types.

Options: Powders, liquids and FLOC LOGS are available for removing fine soil particles and reduce NTU values. Soil and water samples are required for specific areas.

Installation: FLOC LOG can be placed in a jute lined ditch. Proper agitation and mixing time must be achieved in flow of ditch.
